

שימוש בClaude Cowork ושרת Apify – MCP בשביל להוציא את הנתונים מהאתרים.

The screenshot shows the configuration page for the 'apify-mcp-server'. At the top, there's a toggle switch labeled 'Enabled' which is turned on, and an 'Uninstall' button. Below this, a section titled 'Apify API token (Required)' provides instructions on how to obtain a token from the Apify console. A text input field contains a masked token represented by dots. The next section, 'Enabled tools', includes a note about the comma-separated list of tool categories or Actors and a text input field containing the value 'actors,docs,apify/rag-web-browser'. A 'Save' button is located at the bottom right of the configuration area.

ואז שימוש בprompt פשוט

```
use the apify mcp and crawl this site  
https://www.argenprop.com/ for a lot of data as csv, my main  
goal is to have a lot of data to train an AI Model
```
